

Hi,

These steps show you how to enable Goguardian on your laptop or desktop computer using the Chrome browser. This is necessary for teachers to be able to use GoGuardian to check on school work. You need to set up the Google Chrome browser to work with your Dartmouth school account.

For Goguardian to work and install its extensions, the student needs to be logged into Google Chrome as well as the Google suite. Link Accounts must be on and Sync should be on for the extensions to load.

Here are the steps

1. Open the Chrome browser
2. Click in the upper right corner to get the Chrome user signon list. Click on the + Add from the bottom of the list.
3. Type a name for the account.
4. Click Add
5. The 'Make Chrome your own page' will come up. DO NOT Click get started. You want to click Already a Chrome user? Sign in.
6. Enter your full student email account. This includes the @dartmouthschools.org.
7. Enter your password. Like the Chromebooks, the password is case sensitive. You can click on the eye button in the password field to display what you are typing to make it easier to enter your password.
8. Click Link Data. If it asks if you want to create a separate account, click create.
9. You need to Sync the Account. Click Yes, I'm in.
10. Your existing extensions should now start to fill in in the upper right corner. A GoGuardian message should appear in the lower left corner, showing that GoGuardian is running. This will enable the teacher functions and filtering to work.
11. To test, you can go to a blocked site like io games. It should let you search for it, but you should get a restricted error if you try and enter it.
12. To switch between accounts, you can click the icon in the upper right hand corner and select which account you want to use. Goguardian filtering and teacher functions will only work with student accounts and Sync must be on.
